The platform generates ₹36M from 20K orders, but growth is concentrated geographically and across a small number of categories. At the same time, fulfilment and customer experience present potential improvement areas, with ~10% cancellations, a 41-minute average delivery time and a 3.88/5 average rating.

Baby Care contributes ₹9.3M (~26%) of total revenue, while the top three categories contribute nearly 59% of revenue.

Business implication: The platform has strong dependence on a small number of categories, creating an opportunity to diversify growth across underperforming categories.

Maharashtra generates ₹7.1M, the highest among the states, contributing roughly 20% of total revenue.

Business implication: Maharashtra is currently the strongest market and could be used as a benchmark to identify what drives performance compared with lower-revenue states.

Only ~78% of orders are shown as delivered, while ~10% are cancelled. With 20K orders, that represents roughly 2K cancelled orders.

Business implication: Cancellation is large enough to warrant investigation because it can represent both revenue leakage and customer-experience risk.

Average customer rating is 3.88/5, alongside an average delivery time of 41.3 minutes.

Business implication: Delivery performance should be investigated further to determine whether longer delivery times are associated with lower ratings.

- Repeat customers contribute ~73% of customer revenue, highlighting the importance of retention.
- Customer orders are concentrated around 1–2 purchases, indicating an opportunity to increase purchase frequency.
- A small group of high-value customers contributes meaningful revenue and should be prioritized for retention.
- Monthly active customers remain relatively stable, with peaks in May and October.
